FEATURES

Confidential — prepared for Pretec.

Integrations

Integrations

The website integrates with several external systems. Detailed integration contracts (endpoints, payloads, authentication) are specified in a separate backend/integrations document. This section describes the role each system plays from the website's perspective.

Overview

The website is a React storefront with Sanity as headless CMS. It reads product and documentation data from Struct PIM, reads customer/order/inventory data from and sends quotes to Rambase ERP, and uses Maestro (Mozaik Commerce admin panel) for consents, customer/company management and login. Standard Mozaik storefront services provide login, search and sorting. Mozaik Harmony is the integration layer for the broader platform.

Integration roles

System	Direction	Used for
Struct PIM	Read	Product data for PDP/PLP; category text; product images/media (DAM); product- and order-related documentation and certifications
Rambase ERP	Read & Write	Read: customer data, order data, order status, inventory status, entitlements, and (conditional) invoice/receipt PDF and quote statuses. Write: submitted quotes
Maestro (Mozaik Commerce admin panel)	Read & Write	Consent storage and handling, redirects, localization, customer/company management, login invitations
Mozaik storefront	Service	Email login, forgotten-password/reset flow, search (products and articles), sorting
Mozaik Harmony	—	Integration layer for the broader platform
Google Tag Manager / Google Analytics	Write	Standard enhanced e-commerce tracking

Notes on direction of flow

- The website calls **Rambase directly** for customer, order and inventory data.
- **Quotes flow one-way into Rambase.** Conversion to order, fulfillment and completion happen in Rambase and are out of scope for the website.
- **Org-admin role assignment** is performed internally by Pretec in Rambase; the website only reads role data.
- **Entitlements** (which customer-specific products and inventory status a logged-in user may see) originate from Rambase.
- **Company-level certificates** are uploaded to Sanity, not retrieved from PIM. Struct PIM remains the DAM for product images/media and the source for product/order documentation. Sanity holds all other website imagery.
- **GDPR consent** text and categories are editable in Sanity; consent data is stored and handled in Maestro.

Open questions

- Whether Rambase can deliver the original invoice/receipt as a PDF (conditional requirement on My Page).
- Whether quote statuses can be obtained from Rambase (conditional requirement on My Page).

Sanity

Sanity

Sanity is the headless CMS for all editorial website content. Product and category data come from Struct PIM (specified separately); Sanity holds everything else, including all non-product imagery.

Content is created and maintained by a content manager at Pretec. The implementation starts from a standard Mozaik starter kit, which provides baseline content types and blocks. The blocks below are the agreed standard set; additional blocks can be added later.

Content Types

Content type	Purpose
Article	Editorial article pages
News	News pages
Reference project	Reference/case content for completed projects
About us	About-us page
Terms and conditions	Terms and conditions page
Information page	Generic standard information pages
Company certifications landing page	Lists company-level certificates uploaded and structured in Sanity

Notes:

- Articles and news are included in standard Mozaik search (alongside products).
- Company-level certificates are uploaded directly to Sanity. Product- and order-level documentation/certifications are hosted in Struct PIM (not Sanity).

Content Blocks

Editors compose pages from the following blocks:

Block	Description
Text block	Rich text content
Image block	Single image with associated metadata
Product list	Curated list of products (rendered from PIM data)
Link list	List of links
Category list block	List of product categories
Accordion block	Collapsible content sections

Localization

The Sanity content model supports multiple languages. MVP launches with Norwegian content only. Localization/redirects are handled via Maestro.

Consents

GDPR consent text and categories are configured (editable) in Sanity. Consent data is stored and handled in Maestro, not in Sanity.

Filtering Configuration

PLP filtering is driven by Struct PIM product attributes but configured in Sanity. Filters are dynamic: only attributes present on the listed products are shown.

Media

Sanity holds all website imagery except product images/media, which come from Struct PIM (the DAM for product media).

Brand

Rendered content must follow Pretec brand styling: black, orange, and white. The existing website is the visual reference.

Open Questions

- The exact field-level schema for each content type and block is to be derived from the Mozaik starter kit and confirmed with Pretec during implementation.

Design

Design

The website is a public-facing B2B storefront built on the standard Mozaik storefront in React, with Sanity as the headless CMS. The design follows standard Mozaik patterns and components; this section describes the main pages and components and how they behave for anonymous versus logged-in users.

Design Principles

- **Simple and standard.** Reuse standard Mozaik storefront layouts, search, sorting and login components wherever they exist. Custom design is limited to brand styling and the content blocks listed below.
- **Brand identity.** Pretec colors: black, orange, white. The existing Pretec website is the visual reference.
- **Expert B2B audience.** Layouts prioritize fast access to product specifications, documentation, and order information for purchasing departments and project managers.
- **Visitor state drives content.** Prices and inventory status are hidden from anonymous visitors and shown only to logged-in, entitled users. Buy/quote actions require login.

Global Layout

All pages share a common frame:

- **Header:** logo, primary navigation, search entry point, and a sign-in / My Page link.
- **Footer:** links to information pages (about us, terms and conditions, certifications, etc.).
- **Language:** architecture supports multi-language; MVP renders Norwegian only. Display currency is NOK (shown only to logged-in users).
- **Consent banner:** GDPR consent categories/text configured in Sanity; consent data stored and handled in Maestro.

Product Listing Page (PLP)

Category and product listing pages powered by Struct PIM data.

Element	Behaviour
Category text	Sourced from Struct PIM
Display mode 1 (default)	Grid view, 4 products per row
Display mode 2	List-style view, 2 products per row
Responsiveness	Products per row reduce based on screen size
Filtering	Dynamic — only attributes present on the listed products are shown; filters configured in Sanity over Struct PIM data

Element	Behaviour
Sorting	Standard Mozaik sorting: Name A–Z, Name Z–A, Price low–high, Price high–low
Display toggle	User switches between grid and list view

Standard products are visible to everyone. Customer-specific products are visible only to entitled customers (entitlement from backend). Prices and inventory status are not shown to anonymous visitors.

Product Detail Page (PDP)

- Product content and technical specifications powered by Struct PIM data.
- Product images/media served from Struct PIM (DAM).
- **No per-product quote action.** A quote requires login, adding to basket, and proceeding through checkout.
- Price and inventory status shown only to logged-in, entitled users.

Search

- Standard Mozaik search, defined in the backend/integrations specification.
- Covers products (from PIM) and articles only.
- Search interface presents results across these two content types.

Login Screen

- Email-based login using standard Mozaik storefront login.
- Forgotten password / reset link exposed on the login screen via standard Mozaik flow.
- Only existing Pretec customers (accounts created by Pretec) can log in. No self-registration.

Quote Flow & Checkout

- Anonymous and logged-in users can build a basket, but the buy / make-a-quote action is available only when logged in.
- Checkout requires login.
- Checkout fields are pre-filled from the logged-in user's information and remain editable.

Checkout fields:

Field	Notes
Company name	Pre-filled
Contact person	Pre-filled
Reference number	Editable
Delivery address	Pre-filled, editable
Pickup / delivery option	Selection
Preferred shipment date	Date picker, defaults to 2 days ahead

Submitting sends the basket into Rambase as a quote. Downstream conversion, fulfillment and completion happen in Rambase (out of scope).

My Page

Dashboard for logged-in customers. Multiple users per company can view the same orders.

- **Order history & status:** list of orders with current status.
- **Order details:** products, customer (invoice address), delivery address, and contact information for both customer and delivery.
- **Order documentation/certifications:** order-specific documentation hosted in Struct PIM.
- **Invoice/receipt PDF:** original invoice/receipt from Rambase (*conditional — open question on Rambase delivery*).
- **Quotes:** submitted quotes with status (*conditional — open question on receiving statuses from Rambase*).
- **Reorder:** repeat a previous order into the basket.
- **Save and resume:** save in-progress orders/quotes and continue later.
- **User administration:** org-admin can invite and manage standard users only. Org-admin cannot promote users to org-admin (set internally by Pretec in Rambase).

Become-a-Customer Request Form (Public)

Public form submitted for manual processing by Pretec; no account is created automatically.

Fields: company name, department, organization number, contact person (email, phone number, direct phone, address, postal code, city), website, company email, invoice method

(EHF or E-mail invoice), shipment arrangement choice (Pretec arranges or own partner), shipment partner customer number, CoBuilder membership (yes/no).

- Displays informational text: "Credit check will be done."

Sanity-Driven Content Pages

Content created and maintained by a content manager at Pretec. Page types:

- Articles
- News
- Reference projects
- About us
- Terms and conditions
- Information pages
- Company certifications landing page (certificates uploaded and structured in Sanity)

All website imagery except product media is held in Sanity.

Content Blocks

Sanity content blocks rendered on content pages:

Block	Purpose
Image block	Single image / imagery
Product list	Curated list of products
Link list	List of links
Category list block	List of categories
Accordion block	Collapsible content sections
Text block	Rich text content

Analytics

Google Tag Manager integration connected to Google Analytics, with standard enhanced e-commerce tracking as the baseline.

Open Questions Affecting Design

- Whether Rambase can deliver the original invoice/receipt as a PDF (affects the invoice/receipt element on My Page).
- Whether quote statuses can be obtained from Rambase (affects the quotes display on My Page).

Prices

Prices

Prices are sourced from Rambase in real time. The website calls Rambase directly and displays the returned price for the logged-in user's company. No prices are calculated or stored in the website.

Visibility

Audience	Price display
Anonymous visitors	No prices shown
Logged-in users	Prices shown, resolved from Rambase for their company

Currency is NOK.

Price resolution

For a logged-in user, Rambase returns the applicable price for each product:

- **Customer-specific or project-related price** when one exists for the user's company.
- **Standard (list) price** when no customer-specific price applies.

The website displays whichever price Rambase returns; the resolution logic lives in Rambase.

Special-price display

When the returned price is a special (reduced) price relative to the standard price, the website shows the saving alongside the price. This applies only to logged-in users with a special price.

Display:

- Original (standard) price
- Special (lower) price
- Saving in amount (NOK)
- Saving in percentage

When no special price applies, only the single applicable price is shown — no original/saving values.

Open questions

- Confirm which fields Rambase returns to support special-price display (original price, special price, and whether saving amount/percentage are returned or must be derived on the website).

Product Page

Product Page

The Product Detail Page (PDP) presents a single Struct PIM product to expert B2B buyers. It follows a conventional product page layout, with strong emphasis on technical specifications, documentation, and PIM-defined product relations.

Data source

All product data, including specifications, media and relations, comes from **Struct PIM**. Product images and media are served from Struct PIM (the DAM). Inventory and price data come from **Rambase** and are subject to visibility rules below.

Page structure

Area	Content
Product header	Product name, key identifying information, product images/media (from Struct PIM DAM)
Specifications	Full technical specification set from Struct PIM, rendered as structured key/value data

Area	Content
Documentation	Product-related documentation/certifications hosted in Struct PIM, available for viewing/download
Related content	PIM-defined relations: related products, spare parts, and other relation types maintained in Struct PIM
Price / inventory	Shown only to entitled logged-in users (see rules)
Action	Add to basket (logged-in users only)

Specifications

Specifications are the most important element of the PDP. They are displayed using the structured attribute data maintained in Struct PIM. The display reflects whatever attributes exist on the product; no fixed attribute schema is imposed by the website.

Documentation

Product documentation and certifications are hosted in Struct PIM and surfaced on the PDP for viewing and download. (Order-specific documentation is handled separately on My Page.)

Related products, spare parts and other relations

Relation sections are populated from relations defined and maintained in Struct PIM. The PDP renders the relation types provided by PIM (e.g. related products, spare parts). Each related item links to its own PDP.

Visibility rules

Element	Anonymous visitor	Logged-in user
Price	Hidden	Shown if entitled (entitlement from Rambase)
Inventory status	Hidden	Shown if entitled (entitlement from Rambase)
Standard products	Visible	Visible

Element	Anonymous visitor	Logged-in user
Customer-specific products	Hidden	Visible only to entitled customers (entitlement from backend)

Actions

- There is **no per-product quote action** on the PDP.
- The **buy / add-to-basket** action is unavailable to anonymous visitors.
- Logged-in users add products to the basket; quotes are submitted via the basket and checkout flow (which requires login).

Open questions

- The exact set of relation types maintained in Struct PIM (beyond related products and spare parts) and how each should be labelled on the PDP.

Product List Page

Product List Page

The Product List Page (PLP) displays the products within a category. Product data is sourced from Struct PIM. Filtering configuration is maintained in Sanity.

Page elements

Element	Description
Breadcrumbs	Navigation trail showing the current category's position in the hierarchy.
Category text	Descriptive text for the category, sourced from Struct PIM.
Product count	Number of products currently listed (reflects active facets).
Product list	Products in the category, rendered according to the selected display mode.

Element	Description
Facets (filters)	Dynamic filters based on Struct PIM product attributes.
Sorting	Standard Mozaik sort options.
Display toggle	Switch between grid and list view.

Display modes

The user can toggle between two display modes. Both are responsive and adapt to screen size.

Mode	Default layout
Grid (default)	4 products per row
List view	2 products per row

Sorting

Sorting uses standard Mozaik sorting. Available options:

- Name — ascending
- Name — descending
- Price — low to high
- Price — high to low

Facets / filtering

- Filters are built from Struct PIM product attributes; which attributes appear as facets is configured in Sanity.
- Filtering is **dynamic**: only attributes that exist on the products in the current listing are shown. Facets with no matching products are not displayed.
- The product count updates to reflect the products matching the active facets.

Visibility rules

These rules apply to product cards on the PLP:

- **Prices** are hidden from anonymous visitors. Prices in NOK are shown only to logged-in users.
- **Inventory status** is hidden from anonymous visitors. It is shown only to logged-in users entitled to see it (entitlement comes from Rambase).
- **Standard products** are visible to everyone. **Customer-specific products** are visible only to entitled customers (entitlement comes from the backend).
- No buy/make-a-quote action is available on the PLP for anonymous visitors. There is no per-product quote action on product cards; quoting requires login, adding to basket, and checkout.

Open questions

None specific to this section.

MyPage

MyPage

My Page is the secure, signed-in area for existing Pretec customers. Users reach it after logging in with their email through the standard Mozaik storefront login. It gives customers self-service access to their orders, quotes, documentation and user administration.

Most of the data shown here comes directly from Rambase, Pretec's ERP system, which the website queries for customer, order and inventory information. Product documentation comes from the Struct PIM. Where data is sourced from Rambase is noted below.

What the user sees

My Page presents a dashboard with the following areas:

Area	What it shows	Data source
Order history	List of the customer's orders with order status	Rambase
Order details	Products, customer (invoice) address, delivery address, and contact information for both the customer and the delivery	Rambase

Area	What it shows	Data source
Order documentation	Order-specific certifications and documentation	Struct PIM
Invoice / receipt	Original invoice or receipt as a PDF	Rambase (conditional — see open question)
Quotes	Submitted quotes with their status	Rambase (conditional — see open question)
User administration	Invite and manage users in the company (org-admin only)	—
Reorder	Re-create an order from a previous one	Rambase
Save & resume	Continue an in-progress order or quote started earlier	—

Orders

- Order history lists the company's orders together with their current status.
- Multiple users in the same company can see the same orders.
- Selecting an order opens its details: the products ordered, the customer/invoice address, the delivery address, and contact information for both the customer and the delivery.
- Each order links to its related certifications and documentation hosted in Struct PIM.
- When available from Rambase, the original invoice or receipt can be opened or downloaded as a PDF.

Quotes

- Logged-in users can see the quotes they have submitted into Rambase.
- Each quote is shown with its status, where Rambase provides that status.
- Conversion of a quote into an order, fulfillment and completion all happen in Rambase and are not shown or managed here.

Reorder

Customers can start a new order or quote based on a previous order, pre-populating the basket with the same products. The customer then proceeds through the standard

checkout/quote flow.

Save and resume

Customers can save an in-progress order or quote and resume it later from My Page.

User administration

- An org-admin can invite new standard users to the company and manage existing standard users.
- An org-admin cannot promote any user to org-admin. Org-admin status is assigned internally by Pretec in Rambase.
- User invitations are handled through Maestro.

Inventory and pricing visibility

- Prices and inventory status are visible to logged-in users.
- Inventory status is shown only to logged-in users entitled to see it; that entitlement comes from Rambase.
- Customer-specific products are visible only to entitled customers; standard products are visible to everyone.

Open questions

- Whether Rambase can deliver the original invoice/receipt as a PDF. The invoice/receipt feature on My Page is conditional on this.
- Whether quote statuses can be obtained from Rambase. The display of quote status is conditional on this.

Cart & Check out

Cart & Check out

The website has cart functionality, but no traditional purchase. A logged-in user adds products to a cart and submits the cart as a **quote** into Rambase. There is no payment, no shipping handling, and no delivery management in the MVP.

Cart

- The cart holds products added by a **logged-in user** prior to quote submission.
- The buy / make-a-quote action is **not available to anonymous visitors**. Adding to cart and submitting a quote both require login.
- Carts can be saved and resumed (see [My Page — Save and Resume](#)). An in-progress cart/quote can be left and continued later.

Checkout

Checkout is the form the user completes to submit the cart as a quote. It requires login. Fields are **pre-filled** from the logged-in user's company/user information and remain **editable**.

Field	Source / Default	Editable
Company name	Pre-filled from logged-in user's company	Yes
Contact person	Pre-filled from logged-in user	Yes
Reference number	Empty	Yes
Delivery address	Pre-filled from company data	Yes
Pickup / delivery option	User selects	Yes
Preferred shipment date	Date picker, defaults to 2 days ahead	Yes

There are no payment or shipping fields. Delivery beyond capturing a delivery address, pickup/delivery option and preferred shipment date is out of scope.

Submission

- On submit, the cart contents and checkout fields are sent into **Rambase as a quote**.
- Quotes flow **one-way** into Rambase. Conversion to order, fulfillment and completion are handled in Rambase and are out of scope for the website.
- Submitted quotes are visible to the user on My Page, with status shown when Rambase provides it (see open questions).

Open questions

- Confirm whether quote statuses are returned from Rambase for display on My Page.

Functional Requirements

Functional Requirements

This section defines the functional behaviour of the Pretec website storefront and its connected Sanity CMS. PIM, ERP and integration internals are specified separately; here they are treated as data sources and services the website consumes.

1. Content Pages (Sanity CMS)

The content manager at Pretec creates and maintains the following Sanity-driven page types:

Page type	Notes
Article	Editorial content
News	News items
Reference project	Showcase of completed infrastructure projects
About us	Standard information page
Terms and conditions	Standard information page
Information pages	Generic standard pages
Company certifications landing page	Company-level certificates uploaded and structured in Sanity

FR-1.1 Content pages are composed from reusable content blocks:

Block	Purpose
Image block	Displays a Sanity-hosted image
Product list	Lists selected products
Link list	List of links
Category list block	Lists categories

Block	Purpose
Accordion block	Collapsible content sections
Text block	Rich text content

FR-1.2 All website imagery except product images/media is stored in Sanity. Product images/media come from Struct PIM (the DAM).

FR-1.3 The company certifications landing page displays company-level certificates uploaded and structured in Sanity.

2. Product Catalogue

FR-2.1 Product Detail Page (PDP)

- PDP content (including technical specifications) is sourced from Struct PIM.
- Product images/media are served from Struct PIM (DAM).
- The PDP has **no** per-product quote or buy action. Quoting requires login, adding to basket, and checkout.

FR-2.2 Product Listing Page (PLP) / Category Pages

- Product listing data is sourced from Struct PIM.
- Category text is sourced from Struct PIM.
- Display modes:
 - **Grid view (default):** 4 products per row.
 - **List view:** 2 products per row.
 - Both are responsive to screen size.
- The display mode is user-toggleable.

FR-2.3 Sorting — standard Mozaik sorting options:

- Name ascending
- Name descending
- Price low-to-high
- Price high-to-low

FR-2.4 Filtering

- Filtering is based on Struct PIM product attributes.
- Filter configuration is managed in Sanity.
- Filtering is dynamic: only attributes present on the currently listed products are shown.

3. Product Visibility and Pricing Rules

Rule	Anonymous visitor	Logged-in user
Prices	Not shown	Shown (NOK)
Inventory status	Hidden	Shown only if entitled (entitlement from Rambase)
Standard products	Visible	Visible
Customer-specific products	Not visible	Visible only to entitled customers (entitlement from backend)
Buy / make-a-quote action	Not available	Available

4. Search

FR-4.1 Search uses standard Mozaik search. **FR-4.2** Search covers products (from PIM) and articles only.

5. Authentication and Account Access

FR-5.1 Only existing Pretec customers can log in. Accounts are created manually by Pretec; there is no self-registration.

FR-5.2 Login uses the standard Mozaik storefront login with **email** as the login identifier.

FR-5.3 A forgotten password / password reset link is exposed on the login screen, using the standard Mozaik storefront reset flow.

FR-5.4 Multiple users may belong to one company. Users in the same company can view the same orders.

FR-5.5 User roles:

Role	Capabilities
Standard user	Standard My Page access
Org-admin	All standard user capabilities, plus invite and manage standard users

- Org-admin **cannot** promote any user to org-admin.
- Org-admin status is assigned internally by Pretec in Rambase.

6. Become-a-Customer Request

FR-6.1 A public request form allows prospective customers to submit a request. Pretec processes requests manually and creates accounts.

FR-6.2 Form fields:

- Company name
- Department
- Organization number
- Contact person: email, phone number, direct phone, address, postal code, city
- Website
- Company email
- Invoice method (EHF or E-mail invoice)
- Shipment arrangement choice (Pretec arranges or own partner)
- Shipment partner customer number
- CoBuilder membership (yes/no)

FR-6.3 The form displays the informational text: *"Credit check will be done."*

7. Quotes, Cart and Checkout

FR-7.1 Cart/Basket

- A logged-in user adds products to a cart prior to quote submission.

FR-7.2 Quote submission

- Quotes are submitted as quotes into Rambase (one-way).
- Conversion to order, fulfillment and completion happen in Rambase and are out of scope.

- The buy / make-a-quote action is **unavailable** to anonymous visitors.

“Note: The context states login is not required to request a quote, but the buy/make-a-quote action and checkout require login. This is recorded as an open question (see Open Questions).”

FR-7.3 Checkout

- Checkout requires login.
- Fields are pre-filled from the logged-in user's information and remain editable:

Field	Notes
Company name	Pre-filled
Contact person	Pre-filled
Reference number	Pre-filled / editable
Delivery address	Pre-filled
Pickup/delivery option	Selectable
Preferred shipment date	Date picker, defaults to 2 days ahead

- No payment or shipping handling is performed in the website MVP.

8. My Page (Customer Self-Service Area)

The My Page dashboard provides:

FR-8.1 Order history and status — list of orders with status, sourced from Rambase.

FR-8.2 Order details, showing:

- Products
- Customer / invoice address
- Delivery address
- Customer contact information
- Delivery contact information
- Order status

- Related order documentation/certifications (hosted in Struct PIM)

FR-8.3 Invoice/receipt PDF — original invoice/receipt from Rambase as PDF. *Conditional on Rambase delivering this (open question).*

FR-8.4 Quotes — submitted quotes displayed with status. *Conditional on receiving statuses from Rambase (open question).*

FR-8.5 User administration — org-admin invites and manages standard users (per FR-5.5).

FR-8.6 Reorder — re-create an order from a previous order.

FR-8.7 Save and resume — save in-progress orders/quotes and resume them later.

9. GDPR Consent

FR-9.1 Consent text and categories are configurable in Sanity. **FR-9.2** Consent data is stored and handled in Maestro.

10. Localization

FR-10.1 Multi-language / localization support is built into the architecture. **FR-10.2** MVP launches in Norwegian only; display currency is NOK.

11. Analytics

FR-11.1 Google Tag Manager is integrated and connected to Google Analytics. **FR-11.2** Standard enhanced e-commerce tracking is the baseline configuration.

12. Brand and Presentation

FR-12.1 Styling uses Pretec brand colors: black, orange, white. The existing website is the visual reference.

Data Sources Summary

Data	Source
Product/category data, technical specs	Struct PIM
Product images/media	Struct PIM (DAM)
Product/order documentation & certifications	Struct PIM

Data	Source
Company-level certificates	Sanity
Content pages and non-product imagery	Sanity
Customer, order, inventory data; quote intake & statuses; invoice PDF; org-admin role	Rambase (called directly by the website)
Consent storage, redirects, localization, customer/company management, login invitations	Maestro
Login, password reset, search, sorting	Standard Mozaik storefront/Mozaik search

Acceptance Criteria.

Acceptance Criteria

This section consolidates the acceptance criteria for all relevant areas of the website and Sanity CMS scope. Criteria for PIM, ERP and integration work are specified in their separate documents. Criteria marked **(Conditional)** depend on open questions and are only in scope if the dependency is confirmed.

Authentication & Access

- Existing Pretec customers can log in using their email (standard Mozaik storefront login).
- New visitors cannot self-register; no registration option is exposed on the login screen.
- The login screen exposes a forgotten-password/reset link using the standard Mozaik flow.
- A logged-out visitor who completes password reset can log in with the new password.
- No prices are visible to anonymous (logged-out) visitors anywhere on the site.
- Inventory status is hidden from anonymous visitors and shown only to logged-in users entitled to see it (entitlement from Rambase).
- Standard products are visible to all visitors; customer-specific products are visible only to entitled customers (entitlement from backend).
- The buy/make-a-quote action is not available to logged-out visitors.

Product Listing Pages (PLP)

- PLP content (products, category text) is sourced from Struct PIM.
- Filtering shows only attributes that exist on the products currently listed (dynamic filtering).
- Sorting offers Name ascending, Name descending, Price low-to-high, and Price high-to-low (standard Mozaik sorting).
- Default display is grid view at 4 products per row; list view shows 2 products per row.
- Display layout is responsive to screen size.

Product Detail Pages (PDP)

- PDP content and technical specifications are sourced from Struct PIM.
- PDP shows no per-product quote action; quoting requires login, add to basket, and checkout.
- Product images/media are served from Struct PIM (DAM).

Search

- Search uses the standard Mozaik search and returns results for products (from PIM) and articles only.

Quote & Checkout

- Any visitor (logged in or not) may add products to the basket, but submitting requires login.
- Checkout requires login.
- Checkout fields (company name, contact person, reference number, delivery address, pickup/delivery option, preferred shipment date) are pre-filled from the logged-in user's information and remain editable.
- Preferred shipment date defaults to 2 days in advance via a date picker.
- Submitting sends the quote into Rambase as a quote; downstream conversion/fulfillment is out of scope.
- No payment or shipping handling occurs in the website.
- Display currency is NOK.

My Page

- Logged-in users see order history with order status.

- Order details show products, customer/invoice address, delivery address, and contact information for both customer and delivery.
- Order-related certifications/documentation are shown from Struct PIM.
- Logged-in users can reorder from a previous order.
- Logged-in users can save and resume in-progress orders/quotes.
- Multiple users in the same company can view the same orders.
- Submitted quotes are displayed to the logged-in user **(Conditional: quote statuses shown only if Rambase delivers statuses)**.
- The original invoice/receipt is shown as a PDF **(Conditional: only if Rambase delivers the PDF)**.

User Administration (My Page)

- An org-admin can invite and manage standard users within their company.
- An org-admin cannot promote any user to org-admin.
- Org-admin status is assigned internally by Pretec in Rambase, not via the website.
- Login invitations are handled via Maestro.

Become-a-Customer Request

- The public request form captures all specified fields: company name, department, organization number, contact person (email, phone number, direct phone, address, postal code, city), website, company email, invoice method (EHF or E-mail invoice), shipment arrangement choice, shipment partner customer number, and CoBuilder membership (yes/no).
- The form displays the informational text "Credit check will be done".
- Submitting the form does not create an account; Pretec processes requests manually.

Sanity Content

- Content managers can create and maintain articles, news, reference projects, about us, terms and conditions, information pages, and the company certifications landing page.
- The company certifications landing page displays certificates uploaded and structured in Sanity.
- All website imagery other than product media is held in Sanity.
- The following content blocks render correctly: image block, product list, link list, category list block, accordion block, text block.

GDPR & Consents

- Consent text/categories are editable in Sanity.
- Consent data is stored and handled in Maestro.

Localization

- The architecture supports multi-language/localization.
- MVP launches in Norwegian only.

Tracking

- Google Tag Manager is integrated and connected to Google Analytics with standard enhanced e-commerce tracking as the baseline.

Branding

- The site adheres to Pretec brand colors: black, orange, and white.

Release Process

- Code is developed and tested in the test environment, then promoted to staging.
- Pretec tests on staging and must approve before production deployment.
- A production re-test is completed before go-live.

Out Of Scope

Out Of Scope

This section consolidates everything that is **not** delivered by this project. The website and connected Sanity CMS solution is the only scope; the items below are either handled by other systems, deferred beyond MVP, or explicitly excluded.

Other systems and integration work

The following are part of the overall Pretec platform but specified and delivered in separate documents:

- **Struct PIM** — product data modelling, product/order documentation, and DAM media management. The website only consumes this data.

- **Rambase ERP** — customer, order, inventory and quote processing; org-admin role assignment; quote conversion, fulfilment and completion.
- **Mozaik Harmony** — the broader platform integration layer.
- **Maestro** — consent storage/handling, redirects, localization configuration, customer/company management, and login invitations.
- **Backend search and integration definitions** — standard Mozaik search behaviour is defined in the backend/integrations specification, not here.

Excluded functionality (website MVP)

Area	Out of scope detail
Payments	No payment handling of any kind.
Shipping	No shipping calculation, booking or fulfilment.
Self-registration	New customers cannot self-register. They submit the become-a-customer request form; Pretec creates accounts manually.
Account creation	All customer accounts are created internally by Pretec in Rambase.
Org-admin assignment	Org-admin status is set internally by Pretec in Rambase. Org-admins cannot promote users to org-admin.
Quote downstream handling	Quotes flow one-way into Rambase. Conversion to order, fulfilment and completion happen in Rambase.
Become-a-customer processing	The request form captures and submits data only. Credit checks and account setup are handled manually by Pretec.

Deferred beyond MVP

- **Additional markets and languages** — MVP launches Norway and Norwegian only. Multi-language/localization is built into the architecture but no other language or market is delivered.
- **Currencies other than NOK** — NOK is the only display currency.

Conditional items (delivered only if upstream data is available)

These are in scope by intent but depend on Rambase delivering the data. They are excluded from committed scope until confirmed (see Open Questions):

- **Original invoice/receipt PDF** on My Page — conditional on Rambase delivering the PDF.
- **Submitted quote statuses** on My Page — conditional on Rambase providing statuses.

Documentation exclusions

- The integrations diagram is removed from both the customer and internal versions.
- The Integration Inventory appears in the internal version only.
- The Feature-to-Integration Matrix is removed from the customer version.
- The Decisions section is not part of the customer version.

Appendix B — Acceptance Tests (KAT)

KAT scenarios will be generated automatically when the specification is compiled.
